Research on the International Baccalaureate

2010
The following list attempts to chronicle the research published on the International Baccalaureate (IB) in 2010. It is the first attempt of what we hope will become a regular update of the research available in the field. This document should serve IB employees, heads of schools, coordinators, teachers and others in the IB community, as well as researchers in the field.

Descriptions of the individual pieces of research are meant to provide a brief overview of the content of publications, and in no way represent the whole of the important background, methodological considerations or findings found therein. As we tried to be as inclusive as possible when compiling these references, no value judgments were made on the validity of the findings or rigour of the studies included here.

In 2010 we found 41 pieces of research published on the IB in total. Of these, 22 references were on the Diploma Programme (DP), 12 on the Middle Years Programme (MYP), 6 on the Primary Years Programme (PYP) and 5 on the IB as an organization or applying to all of or no particular programmes. There were 18 journal articles, 13 masters or doctoral theses/dissertations, 5 research reports, 3 IB position papers and 2 conference presentations. Of these studies, 19 took place in the IB Americas (IBA) region, 5 in the IB Africa, Europe, Middle East (IBAEM) region, 4 in the IB Asia-Pacific region (IBAP) and 12 were global in scope. The most common topic was implementation of the programmes, but curriculum, teaching, students and academic achievement were also popular topics of research.

While concerted efforts were made to include every available piece of research relating to the IB published in 2010, there are undoubtedly some writings that we have missed. Thus, we very much consider this to be an ongoing project, and encourage you to bring any research not included here to our attention at research@ibo.org.

IBAP

East is east and west is west
Walker, George

This paper analyses the IB learner profile and asks how appropriate it is for the cultures of East Asia. The paper concludes that the learner profile does indeed reflect the strong Western humanist foundations of the IB, but accepts that the organization’s successful growth makes sudden change unlikely and undesirable. Instead, it recommends that the learner profile be reviewed regularly and used as a focus for internal debate on this issue.

Holistic education: An interpretation for teachers in the IB programmes
Hare, John

The purpose of this paper is to bring some clarity to what is meant by holistic education and to outline the characteristics and outcomes associated with it. This lack of clarity is an obstacle for teachers, parents and students alike, and such clarity would facilitate a comparison with other educational initiatives and allow curriculum designers to determine whether they are delivering a programme of holistic education.

The International Baccalaureate and a framework for class consciousness: The potential outcomes of a ‘class-for-itself’
Bunnell, Tristan

Since 1999, the IB has created a platform for image consolidation, product standardization, and technological linkage. Out of this has emerged a globally branded "IB World". This creates a potential framework for class consciousness. This paper explores possible outcomes, within the context of the "agenda for global peace" and the "agenda for global business". Alternatively, a "third way" could appear; a class who is business-oriented but socially-responsible.

**The International Baccalaureate in the United States: From relative inactivity to imbalance**

Bunnell, Tristan

The IB has grown exponentially in the US from 268 schools in 1999 to 1,090 schools in 2009. The fact that 49,100 students of a total of 87,800 in 122 countries were from U.S. schools in 2009 has posed problems in strategic planning, assessment and training, the ability of the program to remain politically neutral and international.

**A study of successful practices in the IB program continuum**

Halling, Philip; Walker, Allan; Lee, Moosung

This study analysed data from a global survey of 235 IB coordinators and case studies of 5 Asia-Pacific region schools to illuminates strategies and practices for successful programme implementation and transition in continuum schools. Leadership practices and management strategies to address issues and challenges included strategies for articulation, cross-programme interaction and staffing. Articulation, consistency, coherence and student support were associated with better transitions.

**Creating support structures and services for Title I high schools implementing the IB Programme**

Siskin, Leslie; Weinstein, Meryle; Sperling, Robyn

Examines the experience of four Title I eligible high schools that implemented MYP to DP pathways. Challenges included building pathways across different schools, meshing the MYP and DP philosophies and pedagogies, preconceived notions of IB as selective, funding, pressure to focus on state exams, developing student supports, and staff turnover. The most successful support was professional development. A fully constructed pipeline takes 6 years, but showed a strong pattern of increase in diplomas awarded.

Does the introduction of the graphics calculator into system-wide examinations lead to change in the types of mathematical skills tested?

Brown, Roger

Reports on the introduction of the graphics calculator into centralized examination systems in Denmark, Australia and the IB. The introduction of the calculator required exam writers to consider how to assess mathematical skills within this new environment. Analysis indicated that only two out of the six examinations demonstrated any significant change. The results suggest that it is possible to reduce the use of questions assessing routine procedures with a calculator, but there have not been major changes in how exam questions are written.

Politics and pedagogy: Discursive constructions in the IB Theory of Knowledge - Guide

Smith, Nigel V.; Morgan, Mandy

The Theory of knowledge (TOK) course is cast as the prime example of the international globalized values of the IB. This article argues that such positioning is contested within the TOK curriculum document, leading to confusion and tension among teachers, students and learning. Two constructions of TOK are identified: primarily political goals and pedagogical purposes, and both purposes may be achieved if the personal pedagogical ideology of the teacher coincides with the political positioning of TOK.

The International Baccalaureate dance programme: Learning skills for life in the 21st century

Minton, Sandra Cerny; Hofmeister, Judi

This study explores how a group of IB Dance students constructed meaning from their experiences. A qualitative methodology was used to interpret the data set consisting of observations during class and at a dance concert, and student responses to a questionnaire and interviews. Four themes emerged: self, interpersonal, discipline specific, and interdisciplinary related growth and understanding. Similarities and connections were found between the themes and the 21st-century skills of being accountable, flexible, socially responsible, communicative, creative, collaborative, self-directed and a critical thinker.

The International Baccalaureate Diploma Programme and the construction of pedagogic identity: A preliminary study

Cambridge, James

At different times and geographical locations the DP has been projected onto a variety of pedagogic identities. There has been vacillation between a weak form of retrospective identity and an educational discourse projecting selected elements of the past into the future. A "progressive" decentred therapeutic identity is the version the IB currently appears to project. However, this article proposes that the IB is assailed by market forces and the DP is being driven towards a decentred (market) identity.

Choices of students, parents, and teachers and their effects on schools and communities: A case study of a new enriched high school program

DiGriorgio, Carla

This study is an ethnographic case study of two schools as they implemented an enrichment program. Data were drawn from interviews and observations, curriculum analysis and communications. The study found: (a) motivation to enter the program came largely from parents, (b) educators perceived changes to their stature in the school and a lack of creativity in course planning and execution and (c) international and local students had differing academic and social experiences.

Global education in Massachusetts: A case study of two high schools

Kilpatrick, JoAnn

This study aimed to investigate the process of implementing global education at two high schools. At a suburban school the process focused on a self-selecting, student-centered Global Competence Program. In the urban high school, the process consisted of networks of teachers innovating curricula, a Chinese language program and the introduction of the IB. Findings indicate that the support of school leaders facilitated implementation, but prioritization of competing initiatives, lack of professional development and time to collaborate were challenges.

International-mindedness

IBA

Fulfilling its mission? The promotion of international mindedness in IB DP Programmes

Gigliotti-Labay, Jennifer

This research seeks to determine if teachers in IB DP are integrating global themes and international mindedness (IM) in their classrooms, and the degree to which it has been institutionalized. The qualitative study consisted of a survey, interviews, group discussions and document analysis. Results indicated that teachers and administrators had an understanding of IM, but implemented it in a superficial way. Data suggest that teachers and administrators are not entirely clear as to how to infuse international themes; the IB's conceptualization of IM is not thoroughly defined; and there exists little institutional accountability for implementation.

**Academic performance of IB students entering the University of California System from 2000-2002**

Shah, Seema; Dean, Mike; Chen, Yi-Chun

This report documents the college performance of 1,547 US high school students who participated in the DP and subsequently enrolled in the University of California (UC) system. Performance of IB students is compared to the UC population at large, and a matched comparison group. Analyses indicate that IB students earned higher GPAs and graduated at higher rates. This trend was observed across all income groups. Controls for socio-economic status, high school GPA and SAT/ACT scores, demonstrated that performance in the DP was the best predictor of college performance.

Discourses of IB MYP Benefits: Promotion and Implementation in Schools

Underwood, Gwyn

This largely qualitative research investigates discourses surrounding the benefits, promotion and implementation of the MYP. Literature on ‘effective schools’ and ‘best practices’ is used to provide a basic framework, enabling the MYP’s effectiveness to be determined through the perceptions of practitioners. Data were collected from MYP practitioners around the world and analysed using critical discourse analysis. Findings indicate the MYP is generally considered an effective programme. Analysis highlighted benefits to student learning such as study skills, critical thinking skills and relating learning to life experiences. Drawbacks were also identified, such as time, costs, and complexity of the programme; and suggestions for improvement to further the goals of the programme are made.

*Evaluation of International Baccalaureate Programmes in Texas schools*

Stillisano, Jacqueline R.; Waxman, Hersh; Lee, Yuan-Hsuan; Hostrup, Judy; Alford, Beverly; Braziel Rollins, Kayla; Goolsby, Rhonda

This study examines the impact of the PYP and MYP in Texas classrooms. No significant differences were found in math and reading scores, but favourable instructional practices and student behaviors were observed in IB schools. While this suggests better overall instruction at IB schools, implementation varied between schools. Positive outcomes included teacher collaboration, authentic assessment, increased student motivation, development of critical thinking skills and increased global and cultural awareness. Challenges included staff recruitment and retention, balancing IB with state and district requirements, extra time for collaboration, difficulty and workload for students, student mobility, and lack of support from districts, parents or teachers.
